

PreviDent 5000

What is PreviDent 5000?

A topical fluoride toothpaste for use as a dental cavity preventive agent that has five times the amount of fluoride than the regular toothpaste.

Why do we recommend PreviDent 5000?

The high amount of fluoride helps protect against cavities and remineralize existing cavities.

- It is available at our front desk at cost or by prescription.
- Follow these instructions unless otherwise instructed by your pediatric dentist:
 1. Apply a pea-sized amount of PreviDent 5000 Plus (Rx) to a toothbrush. Brush thoroughly once daily for two minutes, preferably at bedtime.
 2. After use, spit out excess. For best results, do not eat, drink, or rinse for 30 minutes.
- Caution: Keep away from small children (less than 6 years old) and pets because of the risk of side effects.
